DiabloSport inTune Instructions:

inTune user manual: http://diablosport.com/manualFiles/inTune_Comp_User_Manual.pdf

Data Logging:

For the data logging, the parameters you need to log are already pre-selected when you go into the logging function on the intune... so you'd just need to go to logging, then start recording, stop recording, save the log...

so... make sure the vehicle is fully up to normal operating temps before logging, and you want to do the log during the warm part of the day - not at night or early morning... then you want to get on the highway, and drive steady keeping your RPM's anywhere between 1700-2400 as much as you can... if you have a 6-speed tranny, you can do the data log in 5th gear if needed, so you don't have to go 90mph haha... record the log for about 2-3 minutes, then you can stop the recording and save the log.

Copying the tune files and data log from inTune to computer:

For your intune, the tune files I need can be found on the intune usb drive... connect it to your computer and an intune usb drive appears... go into that intune usb drive.. there's a TUNES folder - go into that TUNES folder.. copy all of those tune files in there to your hardrive... then you would attach those tune files in an email to me...

there will also be a LOGS folder in that intune usb drive... so you'd copy the log file from that logs folder to your harddrive, then can attach that log file in the email as well...
